What is Body Mass Index (BMI)?

Obesity is most commonly calculated using body mass index (BMI). BMI is calculated by dividing a person's weight in kilograms by his or her height in square meters. BMI is not used to determine a person's actual percentage of body fat, but it is a good indicator to categorize weight in terms of what is healthy and unhealthy.

BMI Ranges

(For adults 20 years and older)

Underweight	Less than 18.4
Normal	18.5 - 24.9
Overweight	25 - 29.9
Obese	30 - 39.9
Morbidly Obese	Greater than 40
